

We deliver clean products to you.

We use AdvaCare™ Disinfectant to effectively kill the SARS-Cov-2 virus that causes COVID-19. EPA Registration #1677-193.

ITU AbsorbTech processing facilities take effective steps to help ensure we provide clean and safe products.

We follow a “Hazard Analysis Critical Control Point Process.”

We have a comprehensive plan to control chemical, microbial and physical hazards in our garment processing facilities called HACCP, or Hazard Analysis Critical Control Point.

Our HACCP plan for garments includes extensive training for our employees on the importance of personal hygiene and proper hand washing. Every Critical Control Point work area maintains adequate supplies of anti-bacterial disinfecting and cleansing wipes, and equipment sanitizing stations.

We use Ecolab validated wash formulas, antimicrobial disinfecting products, and hygiene testing services.

We work with Ecolab Textile Care experts to establish the most effective wash formulas to ensure cleanliness of the garments and towels

we service. These products are regularly tested by Ecolab to ensure we are meeting hygienically clean standards.

Our cleaning process for white garments, bar and huck towels includes Ecolab AdvaCare™ Disinfectant at no additional cost to our customers.

AdvaCare™ Disinfectant is an EPA-registered (#1677-193) antimicrobial disinfectant for textiles. It effectively kills common microorganisms, including staph, e.coli 0157:H7, salmonella, listeria, and SARS-COV-2, the virus that causes COVID-19.

Some of our customers may notice a slight vinegar scent on garments and towels.

This is normal for textiles that have been processed with AdvaCare™ Disinfectant.

Applicable Ecolab letters of guarantee are available upon request. For more on Ecolab, visit ecolab.com.
